1 LIVE

<https://portales-theatre.42web.io/>

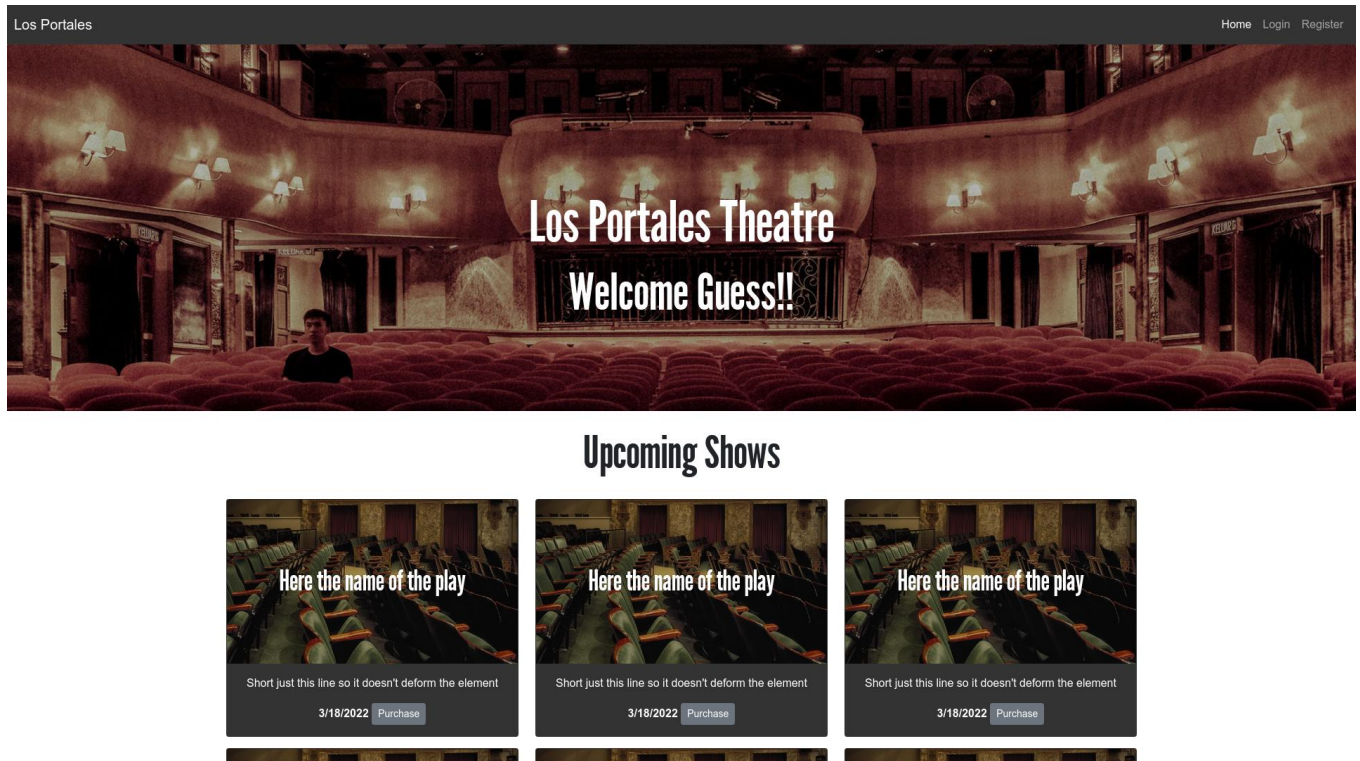

In the link above, the website can be accessed, and the functionality described in the following screenshots can be tested.

2 HTTPS

A certificate has been installed on the website to make use of the HTTPS protocol, to secure the connection between the customer and the website, so their exchange of information is encrypted.

3 HOME

The basic design for the homepage has been created, the homepage contains a navigation bar to access the Login and Registration page. Additionally, it has mockups of how the plays are going to be displayed when they are added to the system.

4 REGISTRATION

Los Portales
Home Login Register

Register

Please fill in this form to create an account.

Email address:

We'll never share your email with anyone else.

Password:

Confirm Password:

First name:

Last name:

Date of Birth:

Phone Number:

Already have an account? [Sign in](#).

A simple registration page, so the customer can register their accounts into the system. The fields requested for this registration page are the ones as the project dictates. However, the customer address is not available/asked in this form, as that information is part of another part of the system which has not yet been developed.

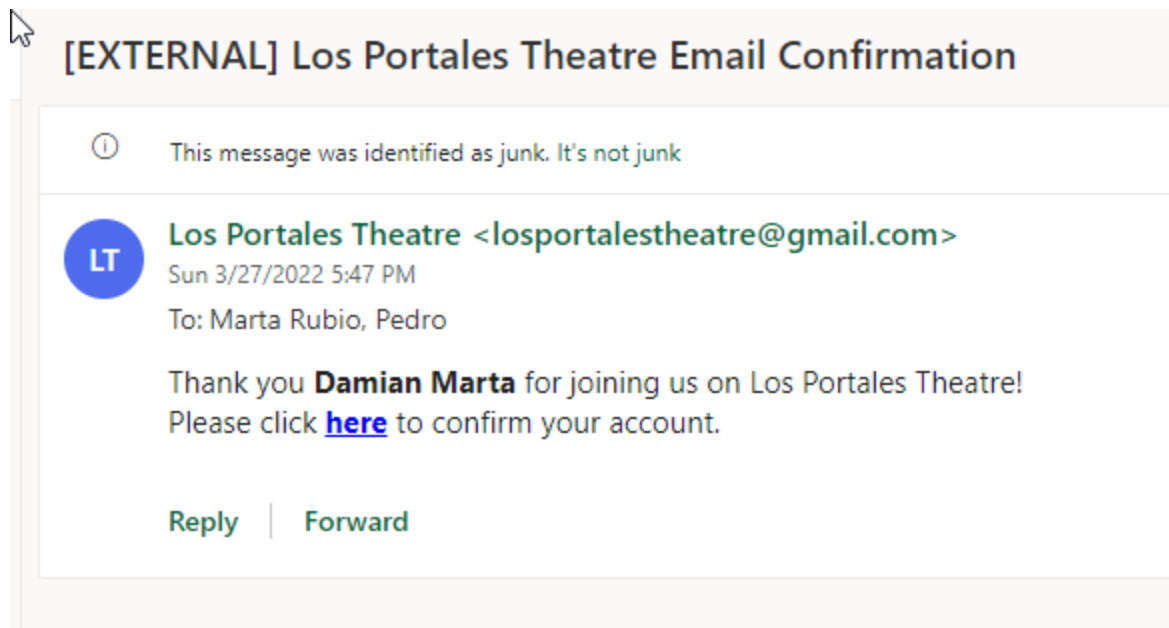

5 CONFIRMATION E-MAIL

Register

Please fill in this form to create an account.

A confirmation e-mail has been sent to your account.
Check your spam folder if you don't see the e-mail.

If the customers input all the information correctly, they are registered into the system, but they still need to confirm their e-mail as the above message explains.

If using Gmail, they can check the confirmation email in their inbox, and if not, they need to go to their spam/junk folder to find it. The contents of the email above as showed in the example, show the name of the user, and ask them to click in the hyperlink to confirm the email.

6 LOGIN

Login

You have successfully confirmed your account. You can login now.

Email

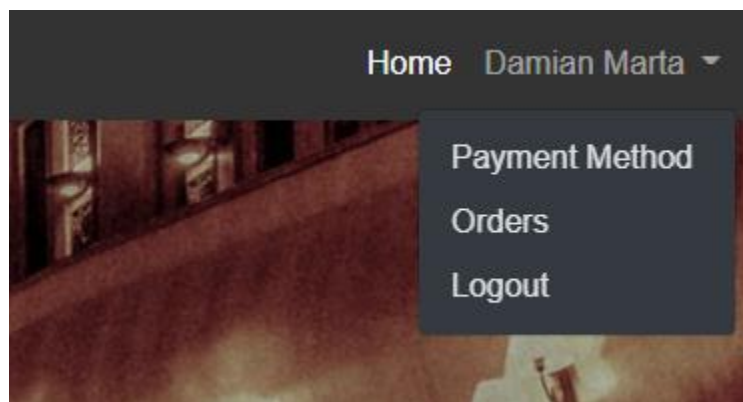

Password

Once the customer has confirmed their e-mail by clicking on the link, they are sent to the login page, where they can introduce their credentials and login into the system.

Login

Error: Your account hasn't been activated, check your e-mail.

If they login without confirming their email address, the message above is going to be displayed and access to the system will not be granted.

When logged into the system, as of now, the user receives a slightly different welcome message in the page, showcasing the name of the customer on that section and in the navigation bar as a dropdown, where the customer can access to other functions like Payment Method and Orders (to be renamed Tickets), and Logout. As of now, only the logout option works, the others are just placeholders.

Right now, the system has a database called “LosPortales” which has a table with the user information for the registration and login system. The password and the activation code for the account is hashed for security purposes.
